

We're
**California
Friendly[®]**
Plants

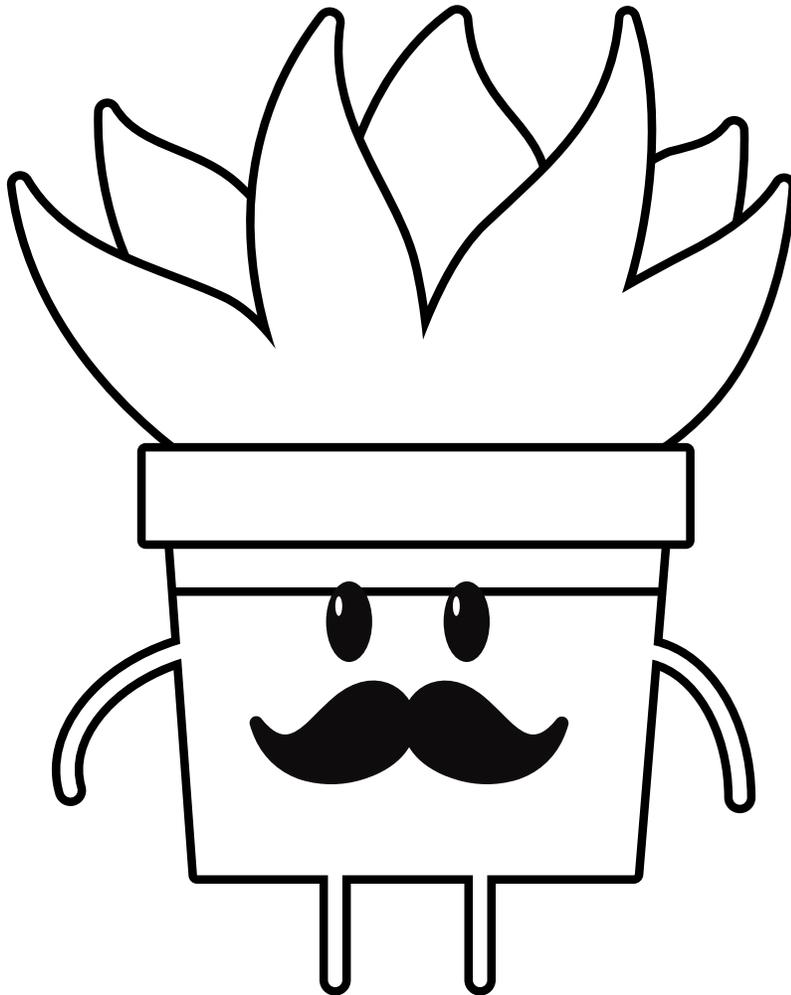

Hello! We're California Friendly Plants®. We're a group of plants that love to grow in sunny California! We need much less water than most other plants or grass. Plant us and watch the birds and bees fly in! So plant some friends today!

Dudley

"Chalk Dudleya"

I'm Dudley! I'm a succulent. That means I store water in my stem, leaves or roots. I love warm weather, and have wide, pale green leaves that feel like wax. Best of all, I only need water once a month in the summer!

Wendy

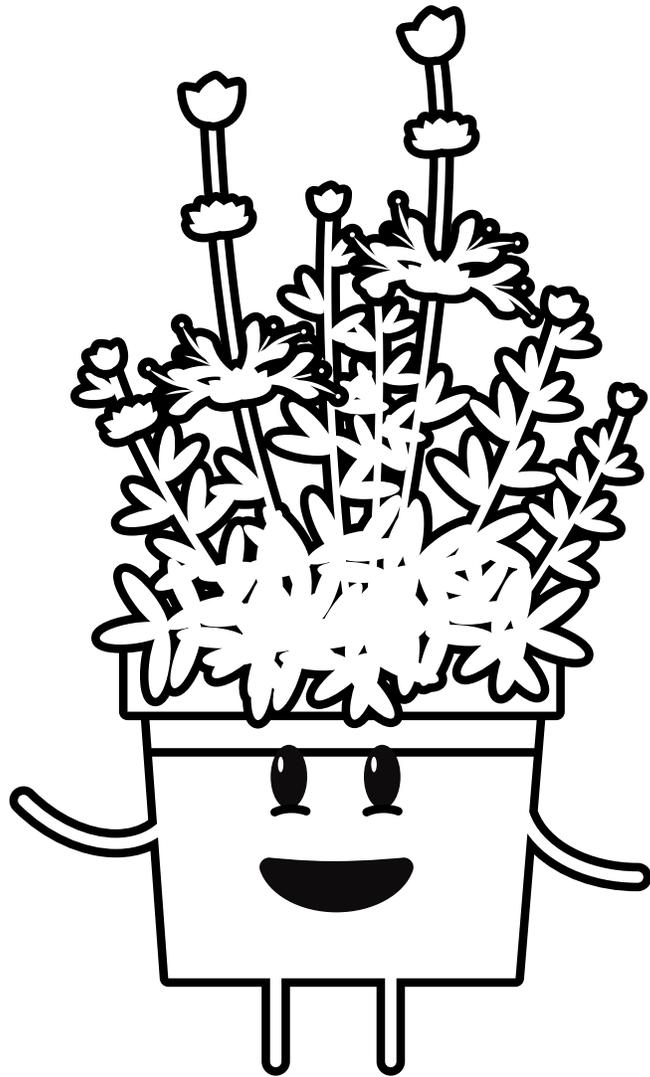

"Wendy Alum Root"

Hello, friend! I'm Wendy. Birds and bees like to visit my little pink flowers that grow on long stems. I am very easy to take care of! I am not very thirsty, only need water about once a month.

Sage

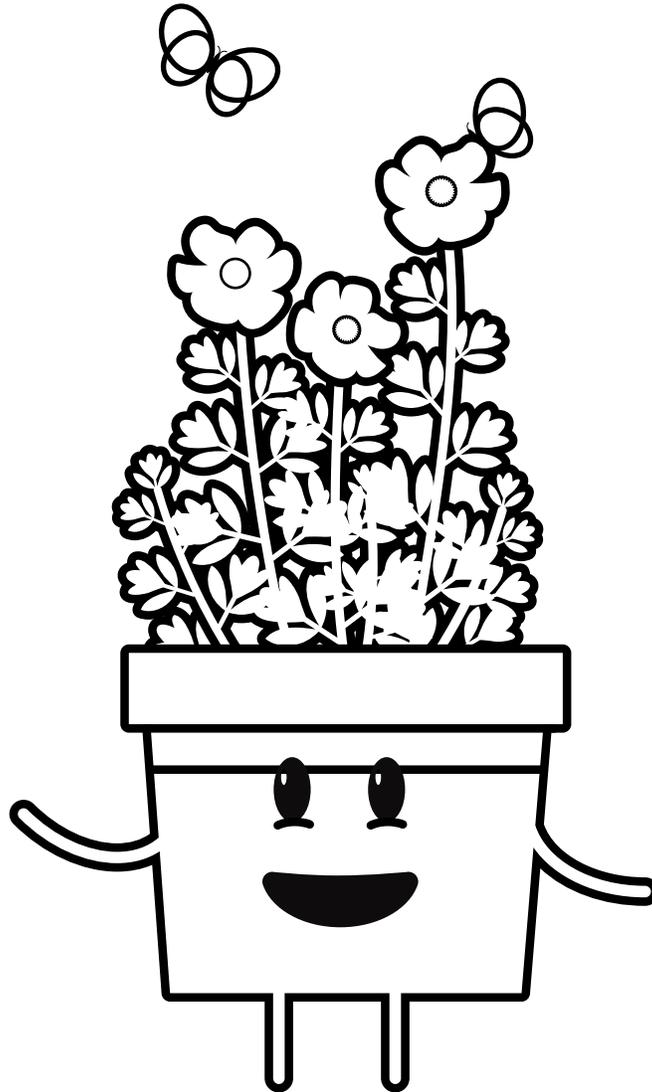

"Cleveland Blue Sage"

Hello everyone! I'm Sage. I think I am the best plant ever created! I have great smelling gray leaves. I grow fast and don't need much water to grow. Hummingbirds love my lavender or purple flowers in summer.

Matty

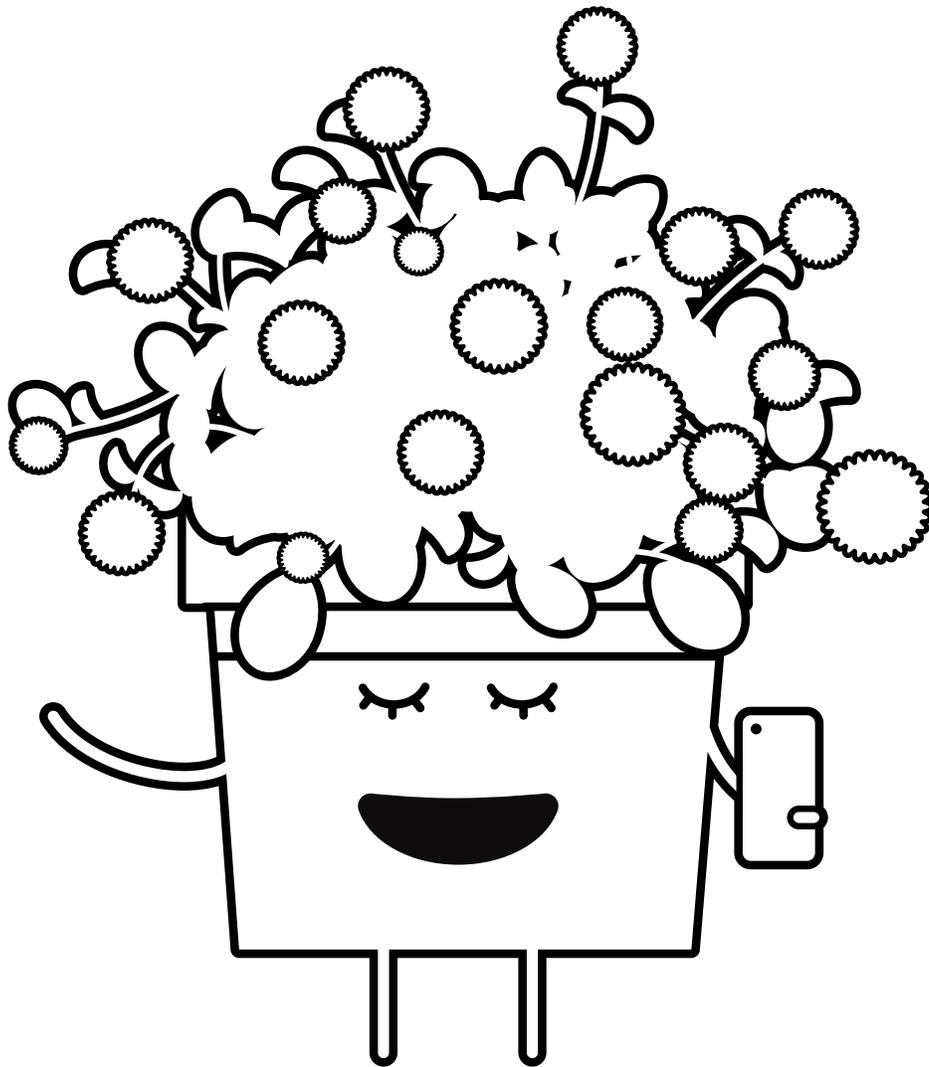

"Matilija Poppy"

My name is Matty! I like to hang out in the California sun and grow very tall. I can grow to be between six feet and nine feet tall. My flowers are white with a bright yellow center. I need very little water!

Concha

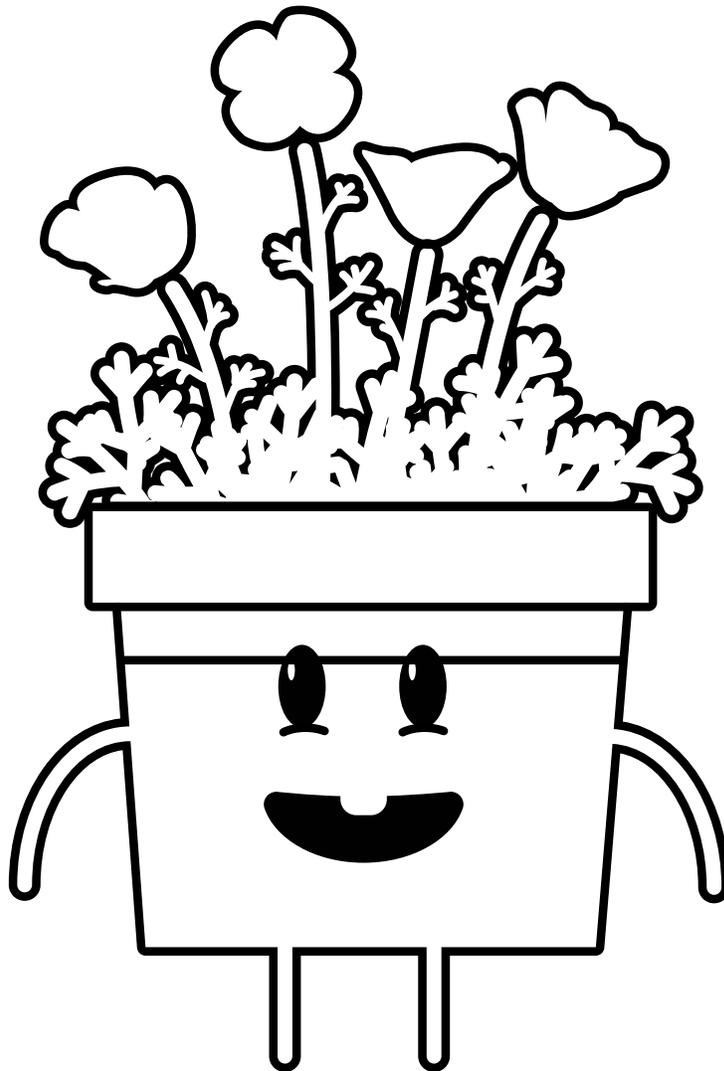

"Concha California Lilac"

My name is Concha! The California sun makes me grow fast! I like to spread out and cover a large amount of land with my dark, green leaves. In spring I grow blue flowers all over that attract a variety of butterflies.

Poppy

"California Poppy"

My name is Poppy! You might already know me — I am the California State Flower. In early summer, bright gold colored flowers grow at the end of my long green stems. I don't need much water and can grow most anywhere.

Iris

"Douglas Iris"

What's up! I'm Iris and I love to rock out in the California sun! My leaves are one to two feet long. My purplish-blue flowers grow two or three flowers on a single stem or stalk. I only need water every two to four weeks.
